

# The Other You.

One set of preferences. Two different soundtracks.

---

Hafiza Rahman | Digital Futures Data & AI capstone

## THE IDEA

# Two sides of the same listener

## YOUR PLAYLIST

## What you already love

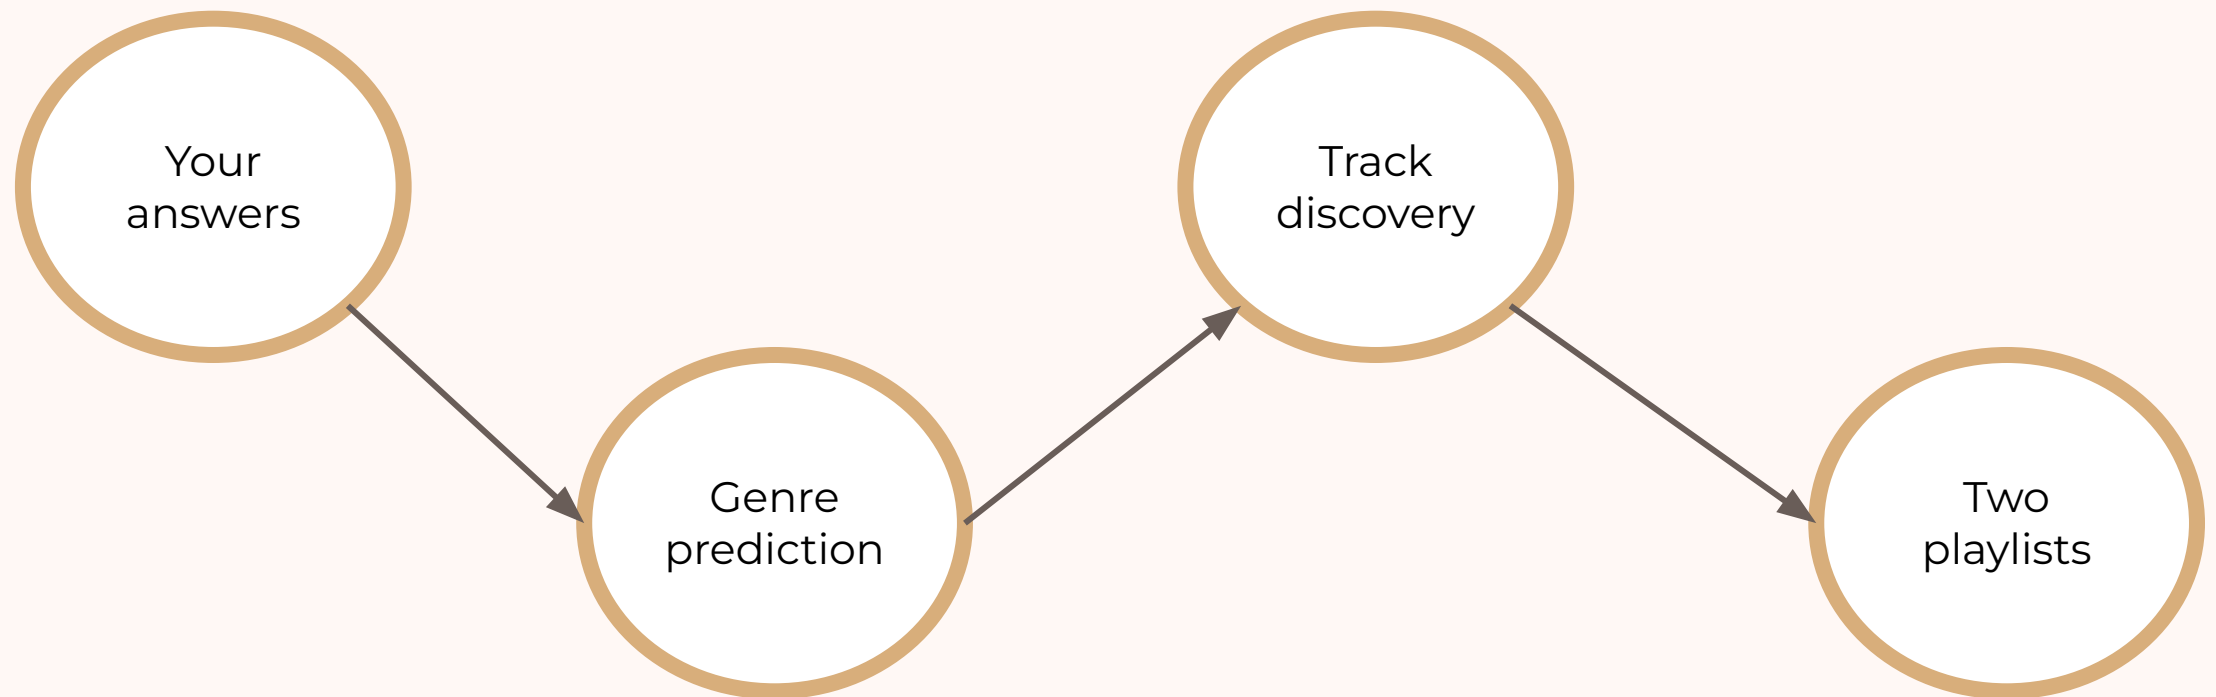

Your selected artists and similar artists, with a familiarity control.

## YOUR OTHER YOU

## A different side of you

Contrasting preferences reveal new genres and tracks.

# From sliders to songs

# Choosing the genre dataset

|                | First dataset      | Second dataset         |
|----------------|--------------------|------------------------|
| Songs          | 250                | 50,000                 |
| Genres         | 5                  | 10                     |
| Initial result | Random Forest: 72% | CatBoost: 43%          |
| Final result   | –                  | Expanded-features: 61% |

# Demo time !

vs

# The Other You

Discover the genres and songs that match your music taste, then uncover the playlist your musical opposite would choose.

Let's get started

## First off, answer these questions about what kind of music you like

Do you prefer hidden gems or very popular songs?

7

How much do you enjoy acoustic instruments?

1

4

### Choose three artists you like

Start typing an artist's name and select the correct artist from the suggestions.

21 Savage

Lana Del Rey

Future

Future

Futurë

Odd Future

### Your recommended playlist

01 | a lot — 21 Savage

| LISTENERS | PLAYS      | Last.fm ↗ | ▶ Preview |
|-----------|------------|-----------|-----------|

# User reviews

Easiest

Hardest

Making the “But what would your ‘other you’ listen to ?” button bigger

Make song cards look clickable

Show collaborations for niche artists more reliably

Letting users choose artists first then automatically fill the sliders

# Learning and improvements

Higher accuracy  
score  $\neq$  better  
choice

More clarity  
improves app use

Source genre  
diverse data set

Research genre +  
characteristics  
more

Thank you for listening !
